

LIST OF CALLS AND TELNET SETTINGS TO WORLD PACKET-RADIO BBS

FIOYP_Update_18/01/2014

Listing of server softwares used is as follow :

- 1 - FBB-WinFbb
- 2 - Xfbb 2r = raspberry
- 3 - Open Baycom Mailbox (OBCM) 3r = raspberry
- 4 - Diebox - Dpbox
- 5 - Jnos/tnos
- 6 - BPQ/BBS
- 7 - PBLinux 3.0 (ja3pyc)
 - DJL2.70 (ja9zyj)
 - BAS1.34S (ji1fga)
- 8 - Msys
- 9 - XSERV500
- 10- Other

Main systems are using AX25 or AXIP protocol .

Some other are also qrv with AMTOR , PACTOR , WINMOR keeping better performance with long distance links. In future , i will try to adjust and add these systems as well ampr.org 44net IP's.

For your information , BBS calls followed by a # are BBS forward links with FIOYP.

Some sysops (as myself) are using several BBS systems at a time , all being linked to share more forwarding abilities to packet network and users.

To write it simple , OBCM telnet port is configured on 4719.
OBCM BBS can also be connected via a WebPage , same dns or IP , generally on port 8080 , but may vary due to local sysop specific settings.

Some examples :

<http://on0ar.dyndns.org:8080>

<http://88.149.155.158:8080>

<http://db0fhn.efi.fh-nuernberg.de:8080>

<http://on4hu.be:81>

<http://jh4xsy.ddo.jp:8080>

Sysops : thanks to send me your connection settings missing in this list ,
Users : any corrections or infos on a new bbs , please email to : floy@orange.fr

Do not take this list as being strictly correct , WP sent @ WW are too often corrupt and distort the census.
